APM MacLean conducts inspections and hazard assessments nationwide at their project sites. One of their main KPIs is to identify any trends that have the potential to become accidents or incidents. APM MacLean prides themselves on their safety record. They continuously aim to meet or exceed all of the requirements set out by the Occupational Health & Safety Act and all OH&S Regulations.

The world of construction continues to evolve. Keeping up with current methods and technologies to conduct inspections and hazard assessments can indeed be challenging. Weekly and monthly inspections were done by visiting sites and completing forms at a site trailer or head office. The forms were then filed and later used to generate reports.

Creating reports manually from paper inspection forms was an arduous process that was very time-consuming. It took several days to compile pages upon pages of excel spreadsheet data into meaningful reports.

APM MacLean needed to simplify and streamline its inspection and assessment processes.

“Field Eagle made the transition from our previous system to their inspection software, a breeze.”

The team at Field Eagle transferred the old inspection paper forms into digital Field Eagle forms. This allowed APM MacLean to conduct and enter their inspections right in the field on a mobile device.

They were no longer confined to an office or vehicle when entering the data collected during the inspection process. Being able to enter the data on-site and in real-time was an absolute game changer. With Field Eagle, reports were generated with a click of a button instantly with the data collected.

“The Field Eagle support team has been incredible throughout the whole set up and training process.”

Field Eagle standardized the inspection process

Field Eagle enabled APM Maclean to conduct their inspections more efficiently. This stopped them from wasting valuable time driving back and forth to the office to enter the data collected.

Within a few months, Field Eagle was able to streamline APM Maclean's inspection workflow. The clearest advantage of the solution is the mobility aspect and time saved. APM MacLean reports up to 50% time saved in the inspection workflow, from gathering data to report generation.

They now use the system to identify any areas for improvement that will help them ensure the safety of their employees, contractors, and the general public.

APM MacLean's inspection time reduced by 50% after using Field Eagle's inspection solution.

"I would absolutely recommend the products and services of Field Eagle to anyone that wants to upgrade, simplify, or take their inspection and assessment process to the next level. Field Eagle products and services have added a new dimension to our Health and Safety Management System. Thanks again, guys."

**- Darryl Murphy,
Safety Manager**

APM MacLean has earned an enviable reputation for being a premier builder in Prince Edward Island and Canada. With a combined 95 years' experience, we have established ourselves as reliable and timely, with the clients' interests in mind. Our focus on Service, Trust, and Value is a key part of why we're building across Canada.

Field Eagle is a tablet-based inspection solution developed by Konverge Digital Solutions. Its benefits include:

- reducing paperwork
- speeding up the inspection and reporting process
- incorporating corporate and regulatory standards into the inspection process.

Field Eagle allows clients to reduce enterprise risk, enable preventative maintenance and create a new source of operational data. Field Eagle's template-based design makes it suitable for inspections of virtually any process.
